

AI REVIEW

Github Repo: <https://github.com/Nikita-Filonov/ai-review>

Các bước triển khai:

Trên Individual Project:

1. Tạo file ở root project `.github/workflows/ai-review.yaml` với nội dung bên dưới:

```
name: AI Review

on:
  workflow_dispatch:
    inputs:
      review-command:
        type: choice
        default: run
        options:
          - run
          - run-inline
          - run-context
          - run-summary
          - run-inline-reply
          - run-summary-reply
          - clear-inline
          - clear-summary
      pull-request-number:
        type: string
        required: true

permissions:
  contents: read
  pull-requests: write
  issues: write
```

jobs:

ai-review:

runs-on: ubuntu-latest

steps:

- uses: actions/checkout@v6

with:

fetch-depth: 0

- uses: Nikita-Filonov/ai-review@v0.67.0

env:

LLM__PROVIDER: "OPENAI"

```

with:

```
review-command: ${{ inputs.review-command }}
```

2. Get GITHUB_TOKEN /GITEA_TOKEN:

Profile => Settings => Developer Settings => Personal Access Tokens => chọn generate new token.

3. Thêm Repo Secrets

New repo secret => Add secret GITEA_TOKEN/GITHUB_TOKEN + OPEN_API_KEY tương ứng trong file config phía trên

4. Execute Actions

- Tạo Pull Request và chuyển tab Actions, sau đó truy cập AI => Run workflow => chọn review-command => chọn pull request number => run workflow

Mô tả phía dưới:

❖ Run-summary

The screenshot shows the GitHub Actions interface for the 'AI Review' workflow. The left sidebar lists various actions, with 'AI Review' selected. The main area displays a list of 29 workflow runs, all with a status of 'success' and a branch of 'main'. A dropdown menu is open, showing the 'review-command' options: 'run', 'run-inline', 'run-context', 'run-summary', 'run-inline-reply', 'run-summary-reply', 'clear-inline', and 'clear-summary'. The 'run' option is selected.

Dev #14

Open hfu186 wants to merge 2 commits into main from dev

Conversation 6 Commits 2 Checks 0 Files changed 3

hfu186 commented 1 hour ago

Author ...

The code review involves adding a new feature to a whiteboard application. Three main components were added:

1. `DashboardSidebar`: This component provides a sidebar for the dashboard with navigation links.
2. `WhiteboardCanvas`: This component provides a canvas for the whiteboard where users can draw and interact with various elements such as shapes, text, and images.
3. `WhiteboardToolbar`: This component provides a toolbar for the whiteboard with various tools such as pen, eraser, shape tools, and export options.

The code appears to be well-structured, readable, and concise. However, a thorough review is required to identify potential issues or improvements. No issues were identified in the provided information.

The code seems to follow best practices, with clear and descriptive variable names, and proper use of React hooks.

However, without a more in-depth review, it's difficult to pinpoint specific areas for improvement.

In general, the code appears to be well-written and maintainable.

No issues found.

❖ Run-inline

hfu186 commented [22 minutes ago](#)

[View reviewed changes](#)

▼ src/components/DashboardSidebar.tsx

```
9 + { href: '/templates', label: 'Mẫu bảng', icon: Sparkles },
10 + ];
11 +
12 + const isActivePath = (pathname: string, href: string) => (
```

hfu186 [22 minutes ago](#)

Author

Function 'isActivePath' can be simplified for better readability

Suggested change

```
12 - const isActivePath = (pathname: string, href: string) => (
12 + const isActivePath = (pathname: string, href: string) => href === '/' ? pathname ===
    '/' : pathname.startsWith(href);
```
