

BOOTSTRAP EXERCISES

For each exercise:

- You take screenshots of the entire desktop screen of the results shown on the browser and include these screenshots in the report.
- There should be at least 1 commit. A practice session with 4 exercises requires at least 4 commits.

Your works (the code) should be pushed to GitHub (each student receives his/her own code repo on GitHub for each lab session from the instructor). Submit the report file to the Google Classroom to report progress.

Students can refer to lecture slides and documents available at:

- <https://getBootstrap.com/docs/5.3/getting-started/introduction/>
- <https://www.w3schools.com/bootstrap5/>

to complete the following exercises.

Exercise 1. Use Bootstrap's grid system to create an image gallery page.

- **Requirements:** Students are provided with an HTML file **index.html** and an image directory containing an example image set (see the **ex1** directory in the repo). Using your favorite browser to open the index.html file, we will see the images presented as a list (ul). This exercise requires students to use the Bootstrap grid to arrange images so that:
 - When the browser is large and medium in size, 6 images are displayed in each row.
 - When the browser is small, it displays 4 images in each row.
 - When the browser is extremely small, it displays 3 images in each row as shown in the image below.

Displaying 3 images in each row when the browser is extremely small.

- **Hints:**
 - Apply `.img-fluid` to the `<img>` tags so that images can automatically resize according to the grid.
 - Apply `.row` to the `<ul>` tags and `col-*` to the `<li>` tags.
 - For example, we can apply the classes as follows:

```

<body>
  <div class="container">
    <h2 class="text-center mt-3">Thư viện ảnh của tôi</h2>
    <ul class="row list-unstyled gy-3">
      <li class="col-md-2 col-sm-3 col-4">
        
      </li>
      <li class="col-md-2 col-sm-3 col-4">
        
      </li>
      <li class="col-md-2 col-sm-3 col-4">
        
      </li>
      <li class="col-md-2 col-sm-3 col-4">
        
      </li>
      <li class="col-md-2 col-sm-3 col-4">
        
      </li>
    </ul>
  </div>

```

Take screenshots of the results, commit the code to git and push/sync to GitHub.

Exercise 2. Create a simple page layout with Bootstrap's grid system.

- **Requirements:** Students are provided with an HTML document **pairup.html+forkme.png** and an image file showing the final design (see the **ex2** directory in the repo). From the given HTML document, using the Bootstrap library, design an interface similar to the one in **pairup.png**.
- **Hints:** The page layout can be divided into rows with the first row as follows:

```

<body>
  <a href="#">
    
  </a>
  <div class="container mt-2">
    <div class="row">
      <div class="col-sm-8 offset-sm-2">
        <div class="d-flex justify-content-between">
          <h3 class="text-muted">Bắt cập</h3>
          <ul class="nav">
            <li class="nav-item">
              <a class="nav-link" href="#">Trang chủ</a>
            </li>
            <li class="nav-item">
              <a class="nav-link" href="#">Thông tin</a>
            </li>
            <li class="nav-item">
              <a class="nav-link" href="#">Liên hệ</a>
            </li>
          </ul>
        </div>
        <hr />
      </div>
    </div>
  </div>

```

Take screenshots of the results, commit the code to git and push/sync to GitHub.

Exercise 3. Design login forms.

- **Requirements:**

1) Create a horizontal login form as follows:

Biểu mẫu đăng nhập

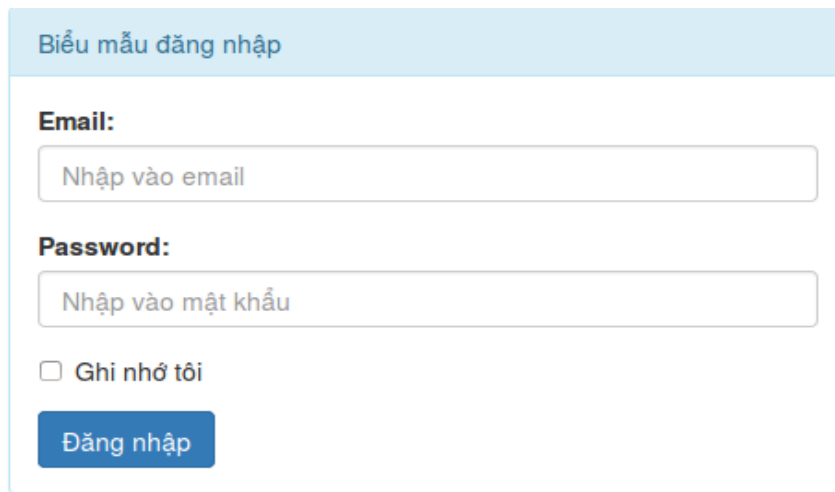

Email:

Mật khẩu:

☐ Ghi nhớ tôi

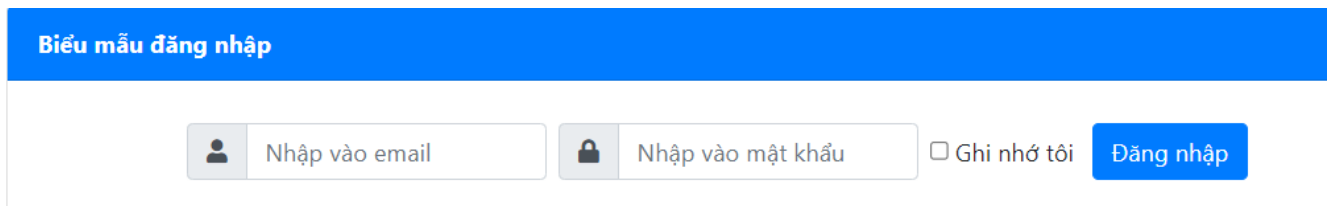

Đăng nhập

2) Create a vertical login form as follows:

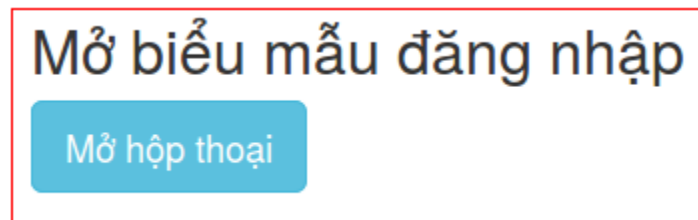

A vertical login form with a light blue header bar containing the text "Biểu mẫu đăng nhập". Below the header, there are two input fields: "Email:" with a placeholder "Nhập vào email" and "Password:" with a placeholder "Nhập vào mật khẩu". Below the password field is a checkbox labeled "Ghi nhớ tôi". At the bottom is a blue button labeled "Đăng nhập".

3) Create an inline login form as follows:

An inline login form with a blue header bar containing the text "Biểu mẫu đăng nhập". Below the header, there are two input fields: "Email:" with a placeholder "Nhập vào email" and "Password:" with a placeholder "Nhập vào mật khẩu". Below the password field is a checkbox labeled "Ghi nhớ tôi". At the bottom is a blue button labeled "Đăng nhập".

4) Create a login modal dialog:

A login modal dialog with a red border. It contains the text "Mở biểu mẫu đăng nhập" and a blue button labeled "Mở hộp thoại".

The user clicks on the "**Open dialog**" button, a login modal dialog is opened. When clicking the "Cancel" button or the "x" button on the top right of the dialog, the dialog will be closed.

- **Hints:**

- Use the Bootstrap grid system to create different form layouts.
- Checkout several form examples at:
<https://getbootstrap.com/docs/5.3/forms/overview/>
- Checkout how to create a modal in Bootstrap at:
<https://getbootstrap.com/docs/5.3/components/modal/>
- The modal component requires the Bootstrap's JavaScript module (<https://getbootstrap.com/docs/5.3/getting-started/introduction/>).
- You need to link the css/all.min.css file (in the **ex3** directory) in the HTML document in order to use icons of Font Awesome (fa-lock, fa-user, ...).

Take screenshots of the results, commit the code to git and push/sync to GitHub.

Exercise 4. Design a tourism website.

- **Requirements:** Students are provided with a set of unstyled HTML documents for a tourism website (the **ex4** directory). The student's task is to use Bootstrap to design the user interface for these HTML documents. You can just implement the provided example designs for these pages or come up with your own designs.
- **Hints:** In the example design for **index.html**, there are four rows:
 - Row 1 is the site header including the website logo and the navigation bar.
 - Row 2 is the slideshow or carousel.
 - Row 3 is the travel destinations.
 - Row 4 is the page footer.

Take screenshots of the results, commit the code to git and push/sync to GitHub.

– The End –
